

Coda Studios

Case Study

Profile:

Coda Studios is a collection of bright boutique office studios arranged around a secured courtyard. Located in the heart of Fulham, they enjoy internet 200 x faster than the UK average with speeds of over 1,000Mbps for their 50+ commercial clients.

Technologies Deployed:

Fibre Internet, Fibre-LAN, 2.4 and 5G Wi-Fi and Cat6 data infrastructure, routers and switches.

Works:

With 57 self contained studios providing office accommodation for over 50 companies, internet speed is paramount. But for years, tenants complained and struggled with 2 MB ADSL lines and BT provided no alternative connectivity.

Wow WiFi designed, project managed and installed a fibre and Wi-Fi network to provide high speed internet to tenants and guests. Despite no upgrade to local BT cabinets, Wow WiFi were able to deploy a fibre ring to service all areas with local Cat6 infrastructure and leading wireless technology.

"Another fantastic outcome for tenants who are blown away by the improved internet speeds. The rental units are now viable for business use and existing tenants are happy."

Ian Rowland
Project Manager

About Wow WiFi:

Wow WiFi is a leading wireless network solutions provider bringing the fastest and smartest WiFi services to enterprise businesses. We can install, commission, maintain and operate a large WiFi network to help businesses empower the mobile generation with exactly what they need.
