Did you know your email signature could be a security weak point?

90%
of people use a single email signature for business.

Your email signature could be a goldmine of info for cyber criminals.

They typically include a combination of:

- **Your name & Job title**
- **Phone Number**
- **Email Address**
- **Website**
- **Social Media Accounts**

- Cyber criminals can use this information to pretend to be you.

- Then trick other people into handing over sensitive info. Or money.

- Spoofing email signatures is a common tactic used to scam businesses.

- You and your team could be tricked in the same way.

Stay protected by:

1 Including only basic info

2 Creating a standard signature for everyone

3 Teaching your team the risks

4 Implementing encryption

5 Monitoring for suspicious activity
