

# Did you know your email signature could be a security weak point?

# 90%

of people use a single email signature for business.

## Your email signature could be a goldmine of info for cyber criminals.

They typically include a combination of:

- Cyber criminals can use this information to pretend to be you.
- Then trick other people into handing over sensitive info. Or money.
- Spoofing email signatures is a common tactic used to scam businesses.
- You and your team could be tricked in the same way.

Stay protected by:

# 1

Including only basic info

# 2

Creating a standard signature for everyone

# 3

Teaching your team the risks

# 4

Implementing encryption

# 5

Monitoring for suspicious activity

Email signatures can expose more than you think
